HPT300-M PURE WATER SYSTEM

Your ultimate atmospheric water generator for maritime use!

With impressive features, the HPT300-M sets a new standard for drinkwater production at sea:

Outstanding Performance:

Produce an impressive 500 liters of water per day and rely on the reliability and efficiency of this remarkable system.

Robustness in Rough Seas and Heavy Rain:

During turbulent sea conditions or heavy rain, you can deactivate the HPT300-M. Subsequently, all essential components, including the air intakes and outlets, will be automatically securely sealed to prevent the ingress of seawater or rain.

Your safety is our top priority

Durable Materials:

The outer shell is constructed from stainless steel, and the machine's components are treated with a special corrosion-resistant coating, ensuring long-term durability even in the harshest maritime conditions.

Integrated 2000-Liter Tank:

The HPT300-M features an integrated 2000-liter tank to maximize your water supply.

No more cumbersome handling of external tanks – everything you need is already integrated into the system.

Automated Control:

Enjoy worry-free operation with the automatic on/off function that monitors the internal tank level. Efficiency and convenience in one, the HPT300-M makes it possible.

Invest in the future of maritime efficiency with HuProTec's HPT300-M. Bid farewell to the hassle of loading pallets with plastic drinking water bottles for your next voyage. Eliminating plastic bottle waste is a significant advantage for the environment and ship management. Embrace a sustainable solution specifically designed for the maritime industry by choosing the HPT300-M. Elevate your water experience with unparalleled efficiency and peace of mind.

Count on HuProTec – your reliable choice for marine water production!

**PURE, FRESH,
MINERALIZED DRINKINGWATER**

HPT300-M Specifications

Impressive Output: HPT300-M generates up to 500 liters of water daily for a reliable supply.

Rugged Design: Endure turbulent seas and intense rain with ease – remotely controlled via a simple on/off function.

Durable Construction: The stainless steel outer shell and corrosion-resistant coating on machine components ensure longevity in harsh maritime conditions.

Integrated 2000-Liter Tank: Maximizes water storage without external tanks, enhancing convenience.

Automated Control: Hassle-free operation with an automatic on/off function, monitoring tank levels for efficiency.
